UOrganized Free

Easy-to-use program for creating and scheduling task lists. KEYMACRO Key Features: Create projects, tasks, and notes Save as an agenda or detailed timetable Organize tasks, notes, and schedule appointments Import existing agendas Customize lists with tags, priorities and reminders ... I'm going to be testing this product for the next couple of days to see if it works well. I haven't had much luck with scheduling software for the past few years so I've been avoiding new apps. This program seems to be a good replacement to things like ACT and Project. Hopefully I'll have some good impressions for the community. This is in beta testing and I'm having a lot of issues with it crashing, freezing, crashing again, locking up, etc. It seems to be crashing on every run. I have an i7 6700HQ, GTX 970, 16gb ram and it's been crashing for as long as I can remember. I've seen an issue with Task in mind before but I'm hoping they address it. They said it's already in development. I also have tried the 64bit version with no success. I'm not sure if this is a 64bit issue or not. Anyways I hope this works out for the developers. I will keep checking in. Good luck to all. Thanks for the good luck wishes. I will not be testing for a while yet. I will be testing this on my main computer first, and if I like it, I will also check it on my personal computer. Thanks again! Hey there! Just wanted to say thank you so much for the beta and have already submitted my feedback. The app actually works pretty great! I have the same computer, so it's a must have for me. As for my personal pc, it works pretty well. The only issue I have is that if I try and open the notes in the app, it crashes. I noticed that the notes have a large font size, but I also noticed that I couldn't set the font color. It also has a bad interface. But hey, maybe they will fix it for the public launch. So thank you again! I would definitely recommend this for everyone! Have used the beta for a few days now. It works pretty well for what I need it to do. So far it's been easy to use, and it's pretty good with updates. I use Win 8.1 and it took about 15 minutes to setup after 77a5ca646e

System Requirements:

PC: (1.8 GHz) Core i5, 2 GB RAM, HD with 2.5 GB space. Nook: 1 GHz Processor MAC: (1.8 GHz) Core i5, 2 GB RAM, HD with 2.5 GB space. This version is compatible with all the versions of 1.3.3. It should be noted that for 1.3.3, the game does not display the lock on button for 2-handed sword. Instead, there is a short cooldown and the feedback is displayed
